ALLERGY ALERT TEST

FOR HAIR COLOURING PRODUCTS

Allergy alert test must be done 48 hours before each use of the product, even if a hair colouring product has been used before. Items you need to prepare the mixture*: Cotton bud, clean tissues, saucer / small plate (do not use metal objects)*

Prepare the mixture. With a cotton bud, mix small amounts of agent 1:colourant and agent 2:developer of the same quantity on a saucer/small plate*. Do not use metal objects. Carefully reseal the colourant and developer containers*. With the cotton bud, apply a pea size of the mixture evenly with a thin layer on an area of 2 by 2 cm on the inner side of the forearm.

Leave the mixture applied for 45 minutes without covering or touching it; avoid contact with clothes; after 45 minutes wash the test area with water and pat dry with a clean tissue.

If you or your client observes any changes to the normal skin appearance, such as itching, redness, swelling on and around the test area during the testing time, or during the following 48hrs, you/your client should rinse off the test area immediately, should do not use the product and should consult a doctor#.
This test represents an important precaution measure which has proved to be reliable when carried out under the conditions outlined. However, be aware that even if an Allergy Alert Test has been carried out, you may still experience an allergic reaction when you colour your hair.
The Allergy Alert Test does not provide a guarantee that allergic reactions will not occur in the future. In case of any concerns or questions please consult a doctor.
*wording subject to change according to the items provided by the manufacturer, how the manufacturer named the items, and/or specific product types to be tested e.g. powders; ready to use formulation.
